JIVANAUT TEST PREP

Strict UI/UX Design Audit

Home page, logo, color system, typography, layout, copy, motion and accessibility

Item	Detail
Site	jivanauttestprep.com (home page, dark mode)
Date	October 17, 2026
Basis of review	One desktop screenshot (~1876 px wide, top of the home page) plus the page metadata. Motion was not observed; animation notes are based on your description (letter-by-letter typing, blood cells flowing downstream).
Not assessed	Hover/focus states, mobile layout, the other pages, load performance, real measured contrast. Items marked **Verify** need a real test.
Tone	Deliberately blunt, as requested. Everything below is a critique of the design, not the effort behind it.

1. Verdict

The concept (a bloodstream running behind a life-science tutor) is memorable and on-topic. The execution is not yet professional enough for parents spending real money on a US tutor. The page spends its first screen on decoration, hides its call to action, uses too many competing reds and pinks, and the logo reads as an ornamental boutique mark, not a rigorous science brand. Every one of these is fixable.

Area	Score /10	One-line verdict
Concept / theme	7	Biology-native idea, good memorability. The red-blood choice is the weak part.
Brand identity and logo	4	Over-detailed, ornamental, tone mismatched to audience, fails at small sizes.
Color system	4	At least five unrelated reds/pinks, a muddy overlay, and one stray green.
Typography	6	Clean sans, but weights, sizes and hierarchy are misapplied.
Layout and hierarchy	4	Headline arrives late; three display-size elements compete; no CTA.
Conversion	3	No visible primary action above the fold. Contact routes suit India, not the US.
Accessibility (estimated)	4	Light gray and coral text over a moving texture. Verify contrast.
US parent trust	4	Gmail address, +91 number, anonymous tutor, no proof visible.

Area	Score /10	One-line verdict
Overall	**4.5**	Strong raw material, weak first impression.

Scores are judgment calls from a single screenshot, meant to rank priorities, not to be exact.

2. Priority fix list

Ordered by impact on a parent or student landing on the page. Effort: S = under a day, M = 1 to 3 days, L = a week or more.

#	Issue	Severity	Effort	Where it is covered
1	No primary CTA visible above the fold	Critical	S	Section 7, Section 10
2	Body and pill text fail likely contrast over moving red texture	Critical	S	Section 5, Section 8, Section 11
3	Hero order wrong: "Home" title, typing line, pill and icons all sit above the real headline	High	S	Section 7
4	Color system: five-plus reds and pinks, no hierarchy; switch to a green system	High	M	Section 4
5	Logo: too many ideas, ornamental, feminine/boutique read, needs white tile	High	L	Section 3
6	Trust gaps: Gmail address, +91 WhatsApp, no tutor name or photo, no results	High	M	Section 7, Section 10
7	Typing animation leaves an empty hero on every load	High	S	Section 8
8	Subject icons are unlabeled emoji, mixed with a text "US" badge	Medium	S	Section 7
9	Fixed 420 px sidebar will crush content on 1366 px school laptops	Medium	M	Section 9
10	Floating chat button and moon toggle: oversized, mid-screen, mismatched	Medium	S	Section 7
11	Tagline appears in three different forms	Medium	S	Section 6
12	Copy errors in pill and credentials line ("a MSc", repeated "Global", EST misuse)	Medium	S	Section 6
13	Nav panel: heavy glow, uneven outer margins, "Classroom" given equal weight	Low	S	Section 7
14	Spacing has no visible scale; vertical gaps are irregular	Low	S	Section 7

3. Logo audit

3.1 What the mark currently contains

As shown in the sidebar tile, the lockup combines: a partial circle outline, a calligraphic swash "J", a DNA helix threaded through the J, a pair of leaves, a microscope, an open book as a base, a high-contrast serif wordmark (JIVANAUT) with a swash J, and a small serif tagline between two flanking rules. All of it is in a red gradient on a white rounded tile.

3.2 Direct answer: is it good?

> **No, not as a working brand mark.** It is a competent illustration, but it is not a logo. A logo must be recognizable at 16 px, reproducible in one color, and carry one idea. This carries six.
>
> **And yes, it reads feminine/boutique.** The causes are specific and listed below. That reading is a mismatch for rigorous, results-driven test prep aimed at teenagers and their parents.

3.3 Why it reads feminine (specific causes)

Cause	Why it pushes the tone
Calligraphic swash J	Script flourishes are associated with weddings, beauty, boutique and lifestyle brands. Science brands use geometric or constructed letterforms.
High-contrast serif wordmark	Thin hairlines and thick stems read as fashion-magazine or cosmetics. They also vanish at small sizes and on dark backgrounds.
Flowing leaf curves	Soft organic petals lean botanical, wellness and florist. Nothing in the geometry is structural or analytical.
Red-to-crimson gradient	Rose and burgundy tones plus gloss read cosmetic. In a bio context the same red also reads as hematology or hospital.
Ornamental tagline with flanking rules	The dash-text-dash device is a classic "heritage boutique" signature, and the text is too small to read anyway.
Symmetrical wreath-like ring	The open circle with botanical elements behaves like a floral wreath or crest, not a laboratory or exploration emblem.

Be clear on the real problem: femininity is not inherently wrong. Ornamentation and mismatch are. You want a neutral-to-authoritative tone that works for a 15-year-old boy, a 16-year-old girl, and a parent skimming for credibility.

3.4 Technical failures

Test	Result and reason
16 px favicon test	**Fail.** Helix strands, microscope eyepiece, leaf veins and book pages collapse into a red blob.

Test	Result and reason
Circular avatar test (WhatsApp, Zoom, Instagram)	**Fail.** The wide wordmark cannot be cropped to a circle; the icon portion is not designed to stand alone.
One-color test (stamp, invoice, B&W print)	**Fail.** Gradient and internal shading are required for the form to read.
Reversed/dark background test	**Fail.** The mark depends on a white tile, which is itself the brightest object on the page and pulls attention from the headline. Verify whether a reversed version exists.
Tagline legibility	**Fail.** Roughly 14 px tall letterforms at the tile width. Below about 200 px logo width it is unreadable. Set the tagline as live text, never inside the artwork.
Kerning and optical margins	**Verify at 2x.** The swash J overhangs the baseline on the left, giving uneven optical margins. Letter pairs in A-N-A-U look tight.
Concept clarity	**Weak.** "Jiva" (Sanskrit for life) plus "-naut" (voyager) is an excellent name idea. The artwork expresses life and school, but not voyage or exploration.

3.5 What to keep

- **The name.** Jivanaut is distinctive, ownable and carries a real story: a navigator of life.
- **The J-plus-helix idea.** This is the single best concept in the current mark. Build the redesign on it and discard the rest.
- **The line "The Explorer of Life Science."** Keep one version of it, as text, outside the logo.

3.6 Redesign brief

Commission or build a mark that passes the tests above. Rules:

- **One idea only.** Suggested directions (pick one, test all three at 32 px):
  - **A. Helix-J monogram:** the J constructed from a single helix strand with one rung; geometric, even stroke.
  - **B. Cell-compass:** a circle (cell) with a compass-needle nucleus, expressing "-naut" and biology in a single shape.
  - **C. Hexagon badge:** a hexagon (molecular ring, honeycomb, cell) containing a bold J with a helix cut-out.
- **Maximum two flat colors.** No gradients, no gloss, no drop shadows. Deep forest green plus mint, or green plus white.
- **Minimum stroke:** stays at least 2 px when the mark is rendered at 32 px.
- **Wordmark:** a sturdy geometric or grotesque sans (for example Sora, Manrope or Outfit), semibold to bold, uppercase, with +3 to +6 percent letter-spacing. No serif, no swash.
- **Tagline:** removed from the artwork. Set it as live text in the site font.
- **Deliverables:** horizontal lockup, stacked lockup, icon-only, white-on-dark, dark-on-light, single-color black, favicon set (16, 32, 180 px), social avatar (circle-safe), SVG source files.
- **Acceptance tests:** squint test, 16 px test, grayscale test, dark and light backgrounds, circular crop.

4. Color system

4.1 What is on the page now

Element	Observed color and problem
Logo	Deep crimson gradient.
Active nav "Home"	Coral red.
Nav panel border and glow	Red-pink neon glow. Competes with the headline.
Typing letter "J" and caret	Salmon/coral. Close to, but not the same as, the nav coral.
Pill text and icon	Coral red on dark gray. Small text, likely below 4.5:1.
Headline second line	Pale pink. A different tint from every other red on the page.
Title underline bar	Red gradient.
Background	Red cells under a gray overlay. The overlay desaturates the red into a muddy maroon-brown. This is the dirtiest-looking area of the page.
Status dot and WhatsApp button	The only greens, unrelated to the red system.

Diagnosis: at least five reds and pinks with no defined roles, plus one green. There is no hierarchy: nothing says "this is the action." Red also carries wrong signals for this category: danger, errors, hematology, stress. Test prep is already anxiety-inducing; the interface should calm, not alarm.

4.2 Proposed system: biology green

Direction: deep forest surfaces with a single mint action color and a rare amber for results. Inspired by fluorescence microscopy (green glow on near-black), which is instantly recognizable to any biology student. Keep greens desaturated and deep; avoid neon lime, which looks like an energy drink.

Dark mode (default)

Swatch	Name	Role
#07130E	Forest Black	Page background
#0E2219	Deep Moss	Cards, sidebar, nav
#153126	Canopy	Elevated cards, hover surfaces
#24493A	Lichen Line	Borders, dividers (1 px)
#EAF5EE	Mist	Primary text
#A9C2B5	Sage	Secondary text, captions
#34D399	Mint	Primary CTA background and key highlight words. The ONLY saturated element in a section.
#6EE7B7	Mint Light	CTA hover, links on dark

Swatch	Name	Role
#F5B83D	Amber	Scores, results, stars. Numbers only, never buttons.
#F87171	Signal Red	Form errors only

Light mode

Swatch	Name	Role
#F4F8F5	Paper	Page background
#FFFFFF	White	Cards
#0B2A1E	Ink	Primary text
#4A6657	Sage Gray	Secondary text
#0B6B4B	Forest	CTA background (white text), links
#095A3F	Forest Deep	CTA hover

Computed contrast checks (WCAG AA = 4.5:1 body text, 3:1 large text and UI)

Pair	Foreground	Background	Ratio / AA
Mist on Forest Black	#EAF5EE	#07130E	17.0:1 Pass
Mist on Deep Moss	#EAF5EE	#0E2219	14.9:1 Pass
Sage on Deep Moss	#A9C2B5	#0E2219	8.8:1 Pass
Dark text on Mint (CTA label)	#04130C	#34D399	9.9:1 Pass
Mint on Deep Moss (highlight word)	#34D399	#0E2219	8.7:1 Pass
Amber on Deep Moss	#F5B83D	#0E2219	9.4:1 Pass
Ink on Paper (light mode)	#0B2A1E	#F4F8F5	14.4:1 Pass
White on Forest (light CTA)	#FFFFFF	#0B6B4B	6.5:1 Pass
Sage Gray on Paper (light mode)	#4A6657	#F4F8F5	5.9:1 Pass

Ratios are computed from the hex values above. Re-test final values in context, especially anything placed over imagery or animation.

4.3 Color usage rules

- **60 / 30 / 10.** 60 percent Forest Black and Deep Moss, 30 percent text and borders, 10 percent Mint plus Amber combined.
- **One Mint action per viewport.** If two things are Mint, neither is the action.
- **Highlight words use solid Mint,** not a gradient. Gradient text reads template-like and hurts legibility.
- **No glow borders.** The red neon outline on the nav is the loudest non-content element on the page. Use a 1 px Lichen Line border.

- **Do not rely on red versus green alone** for any meaning (correct/incorrect, status). About 1 in 12 men have a red-green color vision deficiency. Pair with icons and labels.
- **The WhatsApp green becomes harmonious** in this system. Restyle it as a Mint outline or a Mint-tinted button so it does not look like a third-party widget.
- **Caution:** green is not magic. Avoid a generic eco or wellness look by keeping the background near-black, using plenty of off-white space, and pairing with crisp type.

5. Typography

5.1 What is observed

A single geometric sans family (it looks like Poppins) in several weights. Light weight for body, bold for headings, medium for nav.

Issue	Detail
Light body weight on texture	The paragraph appears to be light weight (300), mid-gray, about 24 px, over a moving red texture. Thin strokes plus low contrast plus motion is the worst case for legibility. Never use weight 300 on dark backgrounds.
Body size too large	About 24 px body text is oversized for running copy. It fills the viewport and pushes the credentials sentence off the screen. 18 to 20 px is the right range.
Three display-scale elements	"Home" (~50 px), the typed letter "J" (~55 px) and the headline (~48 px) are all at nearly identical scale. Three competing H1s. The most important message gets no dominance.
Inverted hierarchy	The page title "Home" is as large as, or larger than, the actual value proposition. Nobody needs to be told they are on the home page.
Sidebar name oversized	"Jivanaut Test Prep" at ~40 px duplicates the wordmark directly above it and competes with the headline.
Nav size	~22 px nav labels are large for a utility menu and make the panel taller than needed.
Two pinks in the headline	The headline mixes white and a pale pink, while nearby elements use a coral. Typographic color should come from the same token set.
Line length	The paragraph runs about 75 characters per line. Acceptable, but at the upper limit. Cap at 60 to 66 characters (about 640 px at 18 px).
Pill label	~19 px bold coral text with a pipe, interpunct and parentheses all in one line. Too much punctuation for one label.

5.2 Proposed type system

Role	Font	Notes
Headings	Sora or Manrope, 700 to 800	Technical but friendly. Slightly negative tracking at large sizes (-0.02em).
Body and UI	Inter, 400 and 500	Highly legible at small sizes. No weight below 400 on dark.
Eyebrows, stats, labels	IBM Plex Mono or JetBrains Mono, 500	Gives a lab/data feel. Use sparingly for tags like "AP BIOLOGY" or "5.0 AVG."

Style	Desktop size / line height	Mobile	Weight and notes
H1 (hero)	56 / 60 px	clamp: 36 to 56 px	800, max width ~14 words

Style	Desktop size / line height	Mobile	Weight and notes
H2 (section)	36 / 42 px	28 / 34 px	700
H3 (card title)	24 / 32 px	20 / 28 px	600
Body large (hero sub)	20 / 32 px	18 / 28 px	400, max 640 px wide
Body	17 / 28 px	16 / 26 px	400
Small / caption	14 / 20 px	14 / 20 px	400 or 500
Eyebrow / label	13 / 16 px	12 / 16 px	Mono 500, uppercase, +0.08em
Button	16 / 24 px	16 / 24 px	600

6. Copy and microcopy audit

Every string below is taken from the screenshot or metadata. Small copy errors cost trust faster than visual flaws, especially with parents.

Current	Problem	Replace with
"Home" (as a page title)	Wasted H1 and wasted space. For SEO the H1 should carry a keyword.	Delete. Make the headline the H1.
"Empowering the Next Generation of Life Science Explorers."	Generic mission-statement language, no audience, no subject, no outcome. "Empowering" is among the most overused words in education.	"AP Biology, taught one-on-one." Subline: "Targeted coaching for AP Biology and USABO, built around your exam date and your gaps."
"Global 1:1 Online Mentorship | US Curricula (EST · CST · PST) & Global"	"Global" appears twice. "US Curricula" is followed by time zones, which confuses curriculum with schedule. Mixed separators (pipe, interpunct). MST (listed in your metadata) is missing. EST is only valid in winter; in October the East Coast is on EDT.	"1:1 Online Tutoring · ET · CT · MT · PT"
"Guided by an educator with a MSc Zoology, MSc Environmental Science, B.Ed, and Diploma in..."	"a MSc" should be "an M.Sc." Credential format differs from your metadata (M.Sc., B.Ed.). Missing "in" after each degree. The tutor is anonymous.	"Taught by [Full Name], M.Sc. Zoology, M.Sc. Environmental Science, B.Ed. 11+ years teaching life science."
"AP Life Science Mentor"	"Mentor" is not what parents type into Google. "Life Science" is vague.	"AP Biology & USABO Tutor"
"Jivanaut Test Prep" (sidebar, 40 px)	Duplicates the logo wordmark directly above it.	Replace with the tutor name and one-line role, or remove.
"Classroom" (nav)	Unclear for a new visitor. This is a student login.	"Student Login" as a quiet utility link, right-aligned.
"Contact" (nav)	Passive. Everything else in the nav is a destination; this should be the action.	"Book a free call" styled as a button.
"Chat with us"	Implies live chat. It opens WhatsApp externally. It also says "us" for what is a solo tutor.	"Message on WhatsApp" or "Ask a question."
Tagline variants	Three forms in use: "The Explorer of Life Science" (logo), "Life Science Explorers" (headline), "Explorers of Life Science" (metadata).	Pick one. Suggested: "Explore life science."
jivanautprep@gmail.com	A free Gmail address undermines credibility for a paid service, and it does not match the domain jivanauttestprep.com.	hello@jivanauttestprep.com

Current	Problem	Replace with
+91 WhatsApp number (visible)	A non-US number on a site targeting the US raises trust and reachability questions.	Lead with a booking link. State "Sessions in US time zones." Keep WhatsApp as secondary.

7. Layout and component-level critique

7.1 Page frame and spacing

Element	Problem	Fix
Outer margins	Left margin is about 10 px; the nav panel nearly touches the right edge (~14 px). The frame is not symmetrical and feels cramped.	Equal 24 px outer margin on desktop. Use a single container width token.
Nested containers	A large rounded main panel contains the hero, while the sidebar is a second rounded card. The nav overlaps the top edge of the main panel so the panel border appears to run into it. It looks clipped.	One surface per region. Decide whether the nav belongs inside or above the panel and align it to the same left and right edges as the content.
Vertical rhythm	Gaps between title, underline, typing line, pill, icons and headline are all different (roughly 40, 85, 55, 30 and 35 px). There is no spacing scale.	Adopt an 8 px scale (8, 16, 24, 32, 48, 64, 96). Use 24 between hero elements and 48 before the CTA row.
Corner radii	Nav, panels, pill, icon circles, buttons, logo tile and toggle each use a different roundness.	Two radii only: 12 px for cards, 999 px for pills and buttons.

7.2 Sidebar

Element	Problem	Fix
Width	About 420 px, roughly 22 percent of a 1876 px screen but about 31 percent of a 1366 px laptop. Content column becomes cramped.	Sticky 280 to 300 px at 1200 px and wider. Below that, collapse to a top bar.
Logo tile	~375 px white square is the brightest object on the page and dominates the viewport before the headline is read.	Reduce to 160 to 200 px, or use a reversed logo directly on the dark surface.
Name and status	Name duplicates the logo. The green "online" dot implies live availability. If that is not true, it is misleading.	Replace with tutor name and role. Make the dot real (an availability indicator) or remove it.
Contact rows	Dark rounded icon boxes ~70 px tall with coral icons. Heavy for utility rows. The WhatsApp row is clipped at the bottom of the screenshot.	Compact 44 px rows. Put the booking link first, email second, WhatsApp third.
Labels	Tiny uppercase gray labels ("EMAIL", "WHATSAPP") look low contrast. Verify.	Use Sage on Deep Moss (see contrast table), minimum 13 px.

7.3 Navigation

Element	Problem	Fix
Neon red outline	Glowing border is louder than the content below it.	1 px Lichen Line border, no glow.
Panel height	~95 px tall for five text links is excessive.	64 to 72 px.
Item hierarchy	All five items have equal weight, but "Classroom" (student login) and "Contact" (conversion) serve entirely different needs.	Left to right: Home, About, Courses, Results; right side: Student Login (text link), Book a free call (button).
Active state	Only a color change on "Home". Color alone is a weak indicator.	Add an underline or pill background for the active item.
Alignment	Panel does not align to the content column edge.	Match the content container left and right edges.

7.4 Hero stack

Element	Problem	Fix
"Home" title and underline	Redundant label, as large as the headline, with a decorative underline bar that adds nothing.	Delete both.
Typing line ("J |")	During the animation the user sees one letter and a large void. Likely layout shift.	Reserve the full headline height. See Section 8.
Pill badge	Small coral text on gray, punctuation-heavy, two "Global"s.	Rewrite (Section 6) and use as a small eyebrow above the H1, in mono.
Icon row	Five 66 px circles, unlabeled. "US" is text while the others are emoji (DNA, globe, brain, medal) in a different visual style. Emoji look different on each OS. The medal with a tiny "1" is unclear. Not clickable as far as the screenshot shows.	Replace with labeled chips: "AP Biology," "APES," "AP Psychology," "USABO." One icon set (for example Lucide, 1.5 px stroke). Link each to its course page.
Headline	Right message, wrong position. Arrives after four other elements. Two colors, with a pink unrelated to the rest of the palette.	Make it the first thing in the column. Highlight one phrase in Mint.
Paragraph	Light gray, light weight, 24 px, over texture. Credentials get cut off.	Lead with value, not credentials. Move credentials to a proof row.
Missing CTA	**There is no button anywhere in the visible hero.** The only action is a floating chat widget.	Primary: "Book a free 20-min consult." Secondary: "See courses." Directly beneath the paragraph, with 32 to 48 px of space.
Missing proof	No score results, student count, rating or testimonial visible.	Add a one-line proof strip under the CTA. Use real numbers only: [X] students, [Y] average improvement, [Z] years.

7.5 Floating elements

Element	Problem	Fix
"Chat with us" button	About 265 x 78 px, green gradient, mid-right of the viewport rather than a corner. It is the largest, brightest button on the page, which makes it the unintended primary action. Brand mismatch with red.	Reduce to a 56 px circular or compact pill in the bottom-right corner. Restyle in Mint. Rename (Section 6).
Moon toggle	~76 px with a red border. Oversized for a utility. In dark mode the moon is ambiguous: is it the current state or the action?	Move into the header as a 40 px icon button with a visible tooltip and aria-label ("Switch to light mode"). Show a sun in dark mode.
Stacking	Two floating controls in the same corner will cover content on mobile.	Keep one floating action maximum.

7.6 Background and overlay

- The gray overlay desaturates the red cells into a dull maroon. The result looks dirty, not vivid.
- Cells are visible directly behind text, reducing legibility. Place a gradient scrim (solid on the text side, fading toward the right) or keep cells confined to the right 40 percent of the hero.
- The diagonal vessel shape draws the eye from top-left to bottom-right, away from where the CTA should be. Direct the flow toward or around the CTA, not across the headline.

8. Animation and motion

8.1 Typing effect

Rule	Specification
Duration	Total under 1.2 seconds. Character interval 25 to 35 ms. Delay 200 ms after load.
Play count	Once per session, not on every navigation. Never loop.
Scope	Animate only the highlighted phrase (for example "Life Science Explorers"). Show the first line instantly so the user can read something immediately.
Layout shift	Reserve the full final text height with min-height or an invisible copy of the final string. Cumulative Layout Shift must be 0 for this block.
Caret	Hide the caret on completion. A permanent blinking caret implies an editable field.
Accessibility	Expose the full sentence to screen readers from the start (real text in the DOM or aria-label). Do not use aria-live on it, or it will read every letter.
Reduced motion	Under prefers-reduced-motion: reduce, show the full static headline immediately.
No-JS / crawlers	The headline must exist in the server-rendered HTML. As seen in my first fetch, the body content did not come through, which suggests it is injected by JavaScript. Search engines and link previews may see an empty page. Verify with view-source or a Google Search Console URL inspection.

8.2 Flowing cells background

Rule	Specification
Animate only transform and opacity	These are GPU-composited. Avoid animating blur, box-shadow or filter; they are expensive and cause jank on school Chromebooks.
Element budget	30 or fewer elements, or a single canvas or WebGL layer. Cap mobile at 30 fps.
Speed	Slow, ambient: 25 to 40 seconds per traverse. Fast motion in peripheral vision competes with reading.
Pause conditions	Pause when the tab is hidden (Page Visibility API) and when the hero is off-screen (IntersectionObserver).
Reduced motion and data saver	Under prefers-reduced-motion or Save-Data, show a static WebP poster (under 80 KB).
Performance budget	Largest Contentful Paint under 2.5 s on a mid-range phone. Test the page at the Lighthouse "Mobile" setting.
Contrast	Motion layer must stay beneath a scrim. Re-check text contrast against the brightest frame, not an average one.

8.3 Concept alternative for the green theme

Replace blood cells with a **fluorescence-microscopy field**: near-black background with softly glowing green-teal cells and organelles drifting slowly, occasionally dividing. This is the aesthetic of GFP imaging, instantly familiar to biology students, and it covers AP Biology, APES and AP Psychology (a neuron-network variant) without leaning on hematology. A blood-only theme narrows the brand to one organ system while the site sells four subjects.

9. Responsive and device notes

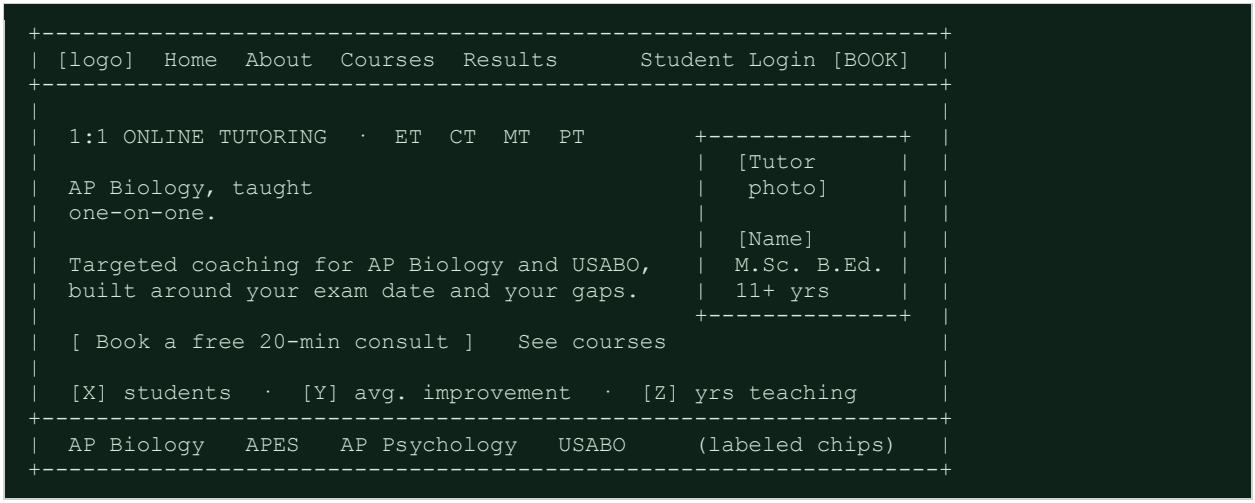

The screenshot is a wide desktop view. Your audience also uses school-issued Chromebooks and phones. Test every width below before launch.

Device	Viewport	What to check
School Chromebook	1366 x 768	Is the headline AND the CTA visible without scrolling? With the current 420 px sidebar and 95 px nav, almost certainly not. **Verify.**
Laptop	1440 x 900	Sidebar proportion, hero text width capped at 640 px.
Desktop	1920 x 1080	Content does not stretch beyond about 1280 px container.
Tablet	820 x 1180	Sidebar collapses to a top bar. Icon chips wrap cleanly.
Phone	390 x 844 and 360 x 800	Logo tile reduced to under 120 px. Nav collapses to a hamburger. CTA is thumb-reachable. Floating controls do not cover text. Body is 16 px minimum.

- **Collapse rules:** at 1200 px and up the sidebar is sticky at about 300 px; at 768 to 1199 px it becomes a top bar with logo, name and the Book button; below 768 px a hamburger menu.
- **Touch targets:** at least 44 x 44 px, with 8 px spacing between adjacent targets.
- **Orientation:** test landscape phone, where a 90 px nav consumes a third of the height.

10. Conversion and trust

10.1 Recommended hero wireframe (desktop)

Bracketed items are placeholders. Use only real, verifiable numbers.

10.2 Home page section order

1. Hero with CTA and proof strip (above).
2. Course cards: one per subject, each with who it is for, format and a "View syllabus" link.
3. How it works in three steps: free consult, diagnostic and plan, weekly 1:1 sessions.
4. Tutor bio with a real photo, credentials and teaching approach.
5. Results and testimonials: first name, grade, score change, optional video.
6. Pricing or packages, or at least a clear "how pricing works" explanation.
7. FAQ: session format, materials, cancellation, parent updates, time zones, refunds.
8. Final CTA band, then footer with a custom-domain email and legal links.

10.3 Trust checklist

Item	Why it matters
Tutor name and photo	A 1:1 service is bought from a person. Anonymous reads as a template or a risk.
Custom-domain email	Gmail on a paid service undermines credibility. Takes under an hour to fix.
Booking link with automatic time-zone detection	Parents compare several tutors in one evening. Fewer clicks win.
Results with real numbers	The strongest persuader for exam prep. If numbers are early-stage, use testimonials with first name and grade.
Privacy policy and terms	Required when serving minors. Link in the footer.

Item	Why it matters
US-hours statement	"Sessions in ET, CT, MT, PT" answers the first logistical question.
Course-level pages	Better for search and for parents who already know the subject they need.
Structured data	Add Organization and Course schema so search results can show rich details.

11. Accessibility checklist

Check	Status from screenshot	Action
Body text contrast (4.5:1)	Likely fail: mid-gray light-weight text over textured red. **Verify.**	Scrim plus Mist text on Deep Moss. See Section 4 table.
Small colored text (pill, labels)	Likely fail: coral on dark gray at ~19 px bold.	Use Mist or Mint Light.
Heading structure	Unclear. "Home" is probably the H1, which is not a useful H1.	One H1 containing "AP Biology" and "tutor" in plain words.
Keyboard focus visibility	Not visible in the screenshot. **Verify.**	2 px Mint outline with 2 px offset on every interactive element.
Icon buttons (moon, chat, icon row)	No visible labels.	Add aria-label, tooltips and visible text where space allows.
Color-only meaning	Active nav and status dot rely on color alone.	Add underline or text change; label the status dot.
Motion	Two autonomous animations.	Honor prefers-reduced-motion for both. Add a pause control if motion exceeds 5 seconds.
Touch targets	Likely fine on desktop; verify on mobile.	44 x 44 px minimum.
Skip link	Not visible.	Add "Skip to main content" as the first focusable element.
Language and alt text	Not verifiable from the screenshot.	lang="en-US" on the html tag. Meaningful alt on images; empty alt on decorative ones.

12. Starter design tokens

Drop-in CSS variables implementing the green system, spacing scale and radii. Adjust to your build tool.

```
:root {
  /* surfaces */
  --bg:        #07130E;
  --surface:   #0E2219;
  --elevated:  #153126;
  --line:      #24493A;
  /* text */
  --text:      #EAF5EE;
  --text-2:    #A9C2B5;
  /* actions and accents */
  --mint:      #34D399;
  --mint-hi:   #6EE7B7;
  --on-mint:   #04130C;
  --amber:     #F5B83D;
  --error:     #F87171;
  /* spacing (8px scale) */
  --s1: 8px;  --s2: 16px; --s3: 24px;
  --s4: 32px; --s6: 48px; --s8: 64px; --s12: 96px;
  /* radii */
  --r-card: 12px;  --r-pill: 999px;
  /* type */
  --font-head: "Sora", "Manrope", system-ui, sans-serif;
  --font-body: "Inter", system-ui, sans-serif;
  --font-mono: "IBM Plex Mono", ui-monospace, monospace;
  --h1: clamp(2.25rem, 5vw, 3.5rem);
}

:root[data-theme="light"] {
  --bg: #F4F8F5;  --surface: #FFFFFF;  --elevated: #FFFFFF;
  --line: #D5E3DA;
  --text: #0B2A1E;  --text-2: #4A6657;
  --mint: #0B6B4B;  --mint-hi: #095A3F;  --on-mint: #FFFFFF;
}

@media (prefers-reduced-motion: reduce) {
  *, *::before, *::after {
    animation-duration: 0.01ms !important;
    animation-iteration-count: 1 !important;
    transition-duration: 0.01ms !important;
  }
}
```

13. Action plan

Week 1: stop the bleeding (all small effort)

- Delete the "Home" title and underline. Put the headline first.
- Add a primary "Book a free 20-min consult" button directly under the paragraph.
- Fix text contrast: scrim behind the text column, Mist body text at weight 400, 18 to 20 px.
- Rewrite the pill, credentials line and nav labels per Section 6.
- Switch the email to your own domain. Lead the sidebar with the booking link.
- Shorten and de-loop the typing animation; reserve its height; add reduced-motion support.

Week 2: system

- Implement the green token set and remove every old red and pink.
- Replace emoji icons with labeled chips in one icon set, linked to course pages.
- Shrink the logo tile, rebuild the nav (no glow, aligned, CTA button), shrink and relocate the floating controls.
- Adopt the 8 px spacing scale and two radii.
- Add the tutor name, photo and one real proof line.

Weeks 3 to 4: brand and depth

- Commission the new logo (Section 3.6) and replace it everywhere, including favicon and social avatars.
- Replace the blood-cell animation with the fluorescence-microscopy concept, with all performance rules from Section 8.2.
- Build course pages, results section, FAQ and pricing explanation.
- Test at all the widths in Section 9, run Lighthouse (mobile) and an accessibility pass.

Final acceptance checklist

Criterion	Target	Pass?
Headline and CTA visible without scrolling at 1366 x 768	Yes	
All text at 4.5:1 or better over the brightest animation frame	Yes	
Logo legible at 16 px and in one color	Yes	
Only one saturated action color per viewport	Yes	
Zero layout shift in the hero	CLS = 0	
Lighthouse mobile performance	90+	
Headline present in server-rendered HTML	Yes	
Custom-domain email and a US-friendly booking path	Yes	

> **Next step:** send me the Courses, About Me and mobile screenshots, and I will extend this audit to those pages. I can also mock up the green hero or write a brief for the logo designer.
